

LUCIFER

series membrane electrode

30000h

Life

1.8W/cm²

Power density

> 120min

Anti-polarity time

Product introduction

- ◆ Adopting six-step dispersion pulping and gradient coating technology, the product has high power density and long service life
- ◆ Adopt ionomer directional serial distribution technology to realize accurate and controllable self-humidification of membrane electrode
- ◆ The integrated thin packaging technology is adopted, which has good product consistency and high yield. It is insensitive to temperature and humidity, metering ratio and pressure, and has good adaptability
- ◆ Independent development and design of the whole production line, high utilization rate of raw materials, controllable cost and affordable price;
- ◆ Customized design and development can be made according to customer's needs

Product data

Power density	1.8w/cm ²
Consistency	Range < 10mV at 1800ma/cm.
Security	Anti-polarity > 120min
Anode platinum loading	≤0.1mg/cm ²
Cathode platinum loading	≤0.3mg/cm ²
Life	30000h
